

# *Introducing a breakthrough in laminate technology.*

Board technology is evolving. Aerialite® is leading the evolution and is proud to introduce a breakthrough in laminate technology: **We call it the Aerialite® Epoxy System.**

This revolutionary composition of Aerialite glass and our new proprietary epoxy resin has been created to:

- Ensure maximum strength, minimum weight and minimum discoloration in surfboards.
- Bond to the exclusive Aerialite cloth formula for an ultra-strong and ultra-light finished board.
- Promote state-of-the-art, environmentally conscious boards with better flex patterns and increased strength at lighter weights than traditional PU/PE surfboards.
- Adapt to both FAST or SLOW hardener or a mixture of both to create intermediate cure times.

For more information on the new Aerialite Epoxy System, email [info@aerialite.com](mailto:info@aerialite.com) or visit [www.aerialite.com](http://www.aerialite.com).
